Professional Summary

Frontend Engineer with approximately two years of experience using React, Next.js, and TypeScript in professional, freelance, and academic projects. Previous experience in web development with Python, Django, HTML, and Bootstrap, as well as technical support involving SQL and inconsistency investigation. Experienced in frontend architecture, Design Systems, accessibility, performance, REST API integration, automated testing, and CI/CD. Reduced CI pipeline execution time by approximately 75%, increased test coverage for application flows by more than 70%, and identified over 100 quality issues through linting.

Education

Bachelor's Degree in Information Systems, Federal Institute of Santa Catarina

Completed Aug 2025

Technical Skills

Frontend: React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, SASS, SPA, SSR, Design Systems, responsive design, and accessibility

Architecture and quality: Frontend architecture, reusable components, web performance, Jest, Vitest, Testcontainers, unit and integration testing, code review, and linting

Backend and data: Node.js, NestJS, Express.js, REST APIs, PostgreSQL, SQL, NoSQL, Firestore/Firebase, Supabase, migrations, and Python

Tools and processes: Git, GitHub Actions, CI/CD, Docker, Google Cloud, Sentry, Figma, Jira, Linear, Scrum, and Kanban

Professional Experience and Projects

Frontend Tech Lead, Lacrei Saúde

Mar 2026 – Jun 2026

- Optimized CI pipelines, reducing execution time by approximately 75% and accelerating the team's feedback cycle.
- Fixed the Design System package versioning and publishing workflow, resolving a months-long issue and unblocking quality releases.
- Implemented linting, formatting, and lint-staged, identifying over 100 previously undetected issues in the components.
- Created and documented a grid and subgrid structure, standardizing responsive interfaces and reducing inconsistencies between Figma and implementation.
- Refactored the routing, authentication, and API integration architecture of React applications, improving predictability and maintainability.
- Monitored errors with Sentry in development and staging environments, supporting investigation and fix prioritization.
- Led code reviews, architecture assessments, and improvements to the Kanban workflow between Development and QA, reducing rework and bottlenecks.

Frontend Mentor, Lacrei Saúde

Jan 2026 – Mar 2026

- Supported the team through pull request reviews, technical feedback, and architecture discussions, reducing bottlenecks in the delivery workflow.
- Helped adapt the frontend to new API contracts, ensuring on-time delivery to the staging environment.

Frontend Developer, Lacrei Saúde

Oct 2025 – Jan 2026

- Developed a feature with synchronized, simultaneous component rendering and fixed layout issues identified by QA.
- Refactored components and end-to-end flows, mapping the user flow, design handoff, and APIs to improve separation of concerns.
- Wrote unit and integration tests, increasing coverage of previously untested flows by more than 70%.
- Contributed to sprint planning and the prioritization of critical bugs within a Scrum team.

Full-Stack Developer, Souldev

Sep 2024 – Dec 2025

- Developed the frontend and backend of a medical payment-splitting system, integrating an external payment API and email delivery with Nodemailer.
- Built a Node.js and Express.js REST API integrated with Arquivo.pt and OpenAI to support academic research in Portugal.
- Optimized Firestore queries from approximately 8 seconds to milliseconds and implemented cached pagination, reducing load times by 60–80%.
- Delivered Next.js fixes for a US-based project, including a HubSpot integration issue.
- Developed Angular.js improvements for a Canadian project, working in sprints managed through Jira.

Full-Stack Developer, IFSC — Extension Project and Undergraduate Thesis

Sep 2024 – Sep 2025

- Independently designed, implemented, and deployed an application with a frontend built using Next.js, TypeScript, and SASS.
- Developed a Node.js REST API with authentication, role-based authorization, pagination, and error handling.
- Implemented unit and integration tests with Jest and Testcontainers, as well as forms with React Hook Form and Zod.
- Designed the PostgreSQL database, created migrations, and documented the architecture, security, endpoints, requirements, and UML diagrams.

Level 1 and 2 IT Support Analyst, Geinfo

Aug 2022 – Sep 2023

- Took ownership of a 30–40-ticket backlog and reduced it to fewer than 10 by resolving outstanding requests and maintaining direct communication with clients.
- Investigated inconsistencies using SQL queries, reproduced bugs, and documented evidence in Jira for the development team.
- Handled more than 10 chats per day with an initial response SLA of up to 5 minutes and configured NFS-e and NFC-e tax integrations.

Python Full-Stack Developer, IFSC — Extension Project

Jun 2021 – Aug 2022

- Developed a web prototype to automate risk classification for a healthcare facility, including CRUD operations and triage rules.
- Organized the codebase with a focus on modularity and maintainability and validated business rules with healthcare professionals.

Languages

Native Portuguese; C1 English, with experience working remotely on US and Canadian projects.
